CURRENT RESEARCH

“Engaging Young Mississippians Through an Architecture of Outreach”

- Collaborative research project with the Department of Food Science, Nutrition, and Health Promotion, MSU Horticulture Club, Department of Biological Sciences, Department of Special Education, Curriculum, and Instruction, and Department of Art to design and implement community gardens as a way to educate young Mississippians on about architecture, gardening, healthy eating, nature, and self-sufficiency through growing their own food to combat food insecurity and to study urban agriculture.

“Comprehensive Tectonics: Technical Building Assemblies from the Ground to the Sky”

- Research and case study textbook proposal accepted by Routledge for a new book that aims to fill the gap between existing literature on building construction assemblies.

“Service-Learning for Architecture Students – Designing a Habitat for Humanity House Prototype”

- Research and seminar course on the impact of service-learning on architecture education. Issues such as designing for underserved populations, social justice in architecture, integration of universal design into single-family homes, and working with non-profit organizations are the core of this research being explored through classes with students designing new prototypes for local Habitat for Humanity chapters.

“Haptic Learning in Design Build Courses”

- Research into existing lecture courses and studio courses along with a possible elective course to determine the benefits of hands-on learning in conjunction with lectures and studio courses.

“Integrated Project Delivery Comes of Age – Pedagogical Evolution and Millennials”

- Research and two design studio courses exploring the ability of integrated project delivery to enhance the learning and retention of information for architecture, interior design, and building construction science students. Students work as teams designing projects and professional traits of integrated project delivery are utilized to format and organize the design studios. Research into the traits of Millennial students and how they can be utilized as part of integrated project delivery is also being conducted.

“Gender and Sexuality in Architecture”

- Course to highlight the achievements, contributions, and history of women in the male-dominated field of architecture through the exploration of the areas of contemporary female architects, comparative history of women in architecture in Western cultures and women in architecture in global cultures, and gender theory as it relates to architecture.

“The Forgotten Architect: Exploring and Addressing Challenges Females Face in Architectural Practices and Faculty Positions”

- Research investigating the reasons women are leaving the profession of architecture as well as not entering the academe as a professor.

PUBLICITY

MSU Newsroom Press Release (Mississippi State Office of Public Affairs News), December 14, 2018.

"MSU School of Architecture students seek to honor the past, educate future generations through UMMC Asylum Hill Project." Part of Associate Professor Alexis Gregory's architecture design studio course, the Asylum Hill Project challenged her students to use their research and site analysis skills in developing designs for a building with a research center, where faculty from MSU's Department of Anthropology and Middle Eastern Cultures can study the human remains exhumed from the asylum cemetery. Other features include a visitor center where the public can learn about mental illness and the asylum's history, and possibly help identify remains. An indoor or outdoor memorial to honor the deceased patients and provide a space of reflection for families is also included. Article by: Sasha Steinberg; Photo by: Logan Kirkland.
